

Extruder Disc Storage Tip

Tools

*Makin's® Professional Ultimate Clay Extruder™
Disc's Included and Additional Disc Sets
Wilton Alphabet and Number Cutters Set*

Wait!! Don't throw that package away!
Have you wondered how to save the discs that come with your extruder? Wouldn't it be nice to be able to see at a glance which discs you have?

There are two ways to save them using the packaging they come in.

Discs That Come With The Extruder

1. The Extruder and discs are packaged with two plastic pieces. Carefully separate the plastic and take out the discs. The piece that fits into the spaces where the discs lay (the one without the flaps) is cut for you.
2. Carefully cut around the outer edge of the plastic package piece with the flaps. Leave the flap at the bottom. This will keep the "lid" in place.
3. Put the discs back in the plastic, put the lid on and you can store them safely and be able to see them at a glance!

Additional Disc Sets Storage

1. For the extra sets, sold separately from the extruder, use the package they came in also. Carefully remove the staples from the packaging and throw them away.
2. Now you can slide the thin cardboard label in and out from the back flaps. There is an additional piece of plastic shaped to the space. Keep this in place, except to get the disc you want.
3. If you don't have much space to store your discs, you can cut the top of the package off just above the shaped plastic, leaving the three flaps attached.

Wilton Alphabet and Number Cutters

The Wilton Alphabet and Number Cutters Set can be stored the same way as the additional disc sets.

1. Simply remove the staples.
2. Turn the package over.
3. Slide out the cardboard
4. Carefully turn the package over again to get the tray of cutters out. Get the cutter you need.
5. When you are through reverse the process and you have a great way to store your cutters, keeping them in alphabetical order, making them easy to find!
